DETAILED ACTION

Claims 1-20 are cancelled. Claims 21-26 are pending.

Election/Restrictions

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

Corresponding to Claim 25, Applicant must elect only one type of inducer of cell death from between "radiation" and "chemotherapy".

Corresponding to Claim 26, Applicant must elect only one type of inhibitor from the group consisting of "siRNA", "antisense molecules" and "antibodies".

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The following claim(s) are generic: Claims 21 and 22.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: The species of radiation and chemotherapy are mutually exclusive treatment methods that would have different effects on cell death and these treatment methods do not share a special technical feature. In addition, the species of types of inhibitors "siRNA", "antisense molecules" and "antibodies" represent different classes of biological molecules (e.g. 21 nt RNAs, oligonucleotides and proteins) and are mutually exclusive of each other. These different structures do not share a common technical feature.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.
